Professional Profile

Data Science & Artificial Intelligence student at Universidad Politécnica de Madrid, currently on an Erasmus exchange at KTH Royal Institute of Technology in Stockholm. Hands-on experience building machine learning models, data pipelines and cloud deployments with Python, SQL and AWS, from imbalanced classification and clustering to web scraping and graph search. Currently working with SEB on an industry project on neural SDEs. Seeking an internship in data science or machine learning.

Education

KTH Royal Institute of Technology <i>Erasmus Exchange Student</i>	Stockholm, Sweden 08/2026 – Present
Universidad Politécnica de Madrid (UPM) <i>BSc in Data Science and Artificial Intelligence</i>	Madrid, Spain 09/2023 – Present

Experience

SEB × KTH Royal Institute of Technology <i>Industry Project – Neural SDEs for Synthetic Stock Data</i>	Stockholm, Sweden 09/2026 – Present
- Working with SEB on a course-based project on neural stochastic differential equations (neural SDEs) for generating synthetic stock price data. - Currently analysing the stability of long-horizon simulations with Monte Carlo experiments on real market data.	
Formula E – Circuito del Jarama <i>Sales Staff</i>	Madrid, Spain 03/2026
- Sales and customer service for attendees at the Formula E event at Circuito del Jarama. - Worked under pressure in a fast-paced, high-attendance international event.	
Private Tutoring <i>Mathematics Tutor</i>	Madrid, Spain 2025 – 2026
Taught mathematics to secondary school (ESO) and Bachillerato students, adapting explanations to each student's level.	

Projects

Telco Customer Churn Prediction <i>Python, scikit-learn, imbalanced-learn</i>	Project page
Classifier on 7,032 telecom customers (26.5% churn) tuned for F2-score, with SMOTE and undersampling inside cross-validation to avoid leakage. Best model (KNN) catches ~80% of real churners, with a test F2 of 0.696.	
Socioeconomic Clustering <i>Python, scikit-learn, SciPy, PCA</i>	Project page
Compared K-Means, Hierarchical, DBSCAN and Gaussian Mixture on ~22,700 Census-style records. Chose K-Means ($k = 5$, silhouette 0.22) over a higher-scoring hierarchical model that put 67% of the data in one cluster, obtaining five interpretable profiles despite weak separation.	
Game Store on AWS <i>AWS, Flask, PostgreSQL</i>	Project page
Deployed a Flask REST API on AWS across two Availability Zones: custom VPC with private subnets, load balancer, auto scaling (2–4 instances), RDS PostgreSQL, and CloudWatch alarms with SNS alerts.	
Top-5 Leagues Scraper <i>Python, Selenium, Pandas</i>	Project page
Scraped 1,636 players from Europe's top five football leagues with five years of market values; cleaned the data and analysed 7 performance and market-value questions.	
Buenos Aires Subway Route Planner <i>Python, NetworkX, PyQt5, Folium</i>	Project page
A* search on a directed graph of 5 lines and 34 stations, with time-dependent edge weights from official GTFS frequencies; desktop app with an interactive route map.	

Skills & Certifications

Programming: Python, SQL, R.

Machine Learning: scikit-learn, PyTorch, TensorFlow, Keras, XGBoost.

Data: Pandas, Polars, NumPy, DuckDB, ClickHouse, Apache Kafka, Matplotlib, Seaborn.

Cloud & Tools: AWS (EC2, RDS, S3, Lambda, VPC, CloudWatch), Docker, Git, GitHub, Linux.

Certifications: GitHub Foundations – GitHub (07/2026).

Languages: Spanish (Native), English (B2).

Interests

Sports, mountain hiking, reading and travelling.
